1. Introduction

This document gathers together all the elements of the disclosures required under Pillar III, which are not covered in the interim condensed consolidated financial statements for the period ended 30 June 2011, and is organized as follows:

Firstly, it gives an overview of the approach taken by ABC Islamic Bank (E.C.) [the Bank] to Pillar I and provides the profile of the risk-weighted assets according to the “standard portfolio” as defined by the Central Bank of Bahrain [the CBB].

Secondly, an overview of risk management practices and framework at the Bank is presented with specific emphasis on credit, market and operational risks and the related monitoring processes and credit mitigation initiatives are set out.

Finally, this document provides all other disclosures required under the Public Disclosure Requirements Module of the CBB.

The disclosures in this section are in addition to the interim condensed consolidated financial statements and are presented in accordance with the Financial Accounting Standards issued by the Accounting and Auditing Organisation for Islamic Financial Institutions [AAOIFI] and the relevant provisions of the CBB and Financial Institutions Law. For matters which are not covered by AAOIFI standards, the Bank and its subsidiary [together the Group] uses the International Financial Reporting Standards [IFRS] and other sections of the interim condensed consolidated financial statements. However, the credit risk exposures considered in this section differ from the credit risk exposures reported in the interim condensed consolidated financial statements due to the application of different methodologies between Basel II and AAOIFI, primarily on account of the following:

- Under the Basel II framework, for credit-related contingent items, the nominal value is converted to an exposure through the application of a credit conversion factor [CCF]. The CCF is at 20%, 50% or 100% depending on the type of contingent item, and is used to convert off-Balance sheet notional amounts into an equivalent on-Balance sheet exposure. In the interim condensed consolidated financial statements, the nominal values of credit-related contingent items are treated as off-Balance sheet.
- Under this section, the credit exposures are classified as per the Standard Portfolio approach mentioned in the CBB’s Basel II capital adequacy framework covering the standardised approach for credit risk. Besides in case of guaranteed exposures, the exposure would be reported based on the guarantor. However, in the interim condensed consolidated financial statements, the assets are presented based on asset class (i.e. Islamic financing, securities, etc).
- Eligible collaterals are considered to arrive at the net exposure under the Basel II framework whereas collaterals are not netted in the consolidated financial statements.
- The equity holding is considered at cost in the Basel II framework whereas it is considered at fair value in the consolidated financial statements.
- Under Basel II framework, certain items are considered as a part of the regulatory capital base, whereas these items are netted-off against assets in the consolidated financial statements.

PUBLIC DISCLOSURES

30 June 2011

2. Group structure

The Bank is an exempt joint stock company incorporated in the Kingdom of Bahrain on 10 December 1985 and registered with the Ministry of Industry and Commerce under commercial registration number 16864. The Group operates under a wholesale islamic banking licence issued by the CBB and are engaged in financial trading in accordance with the teachings of Islam [Shari'a].

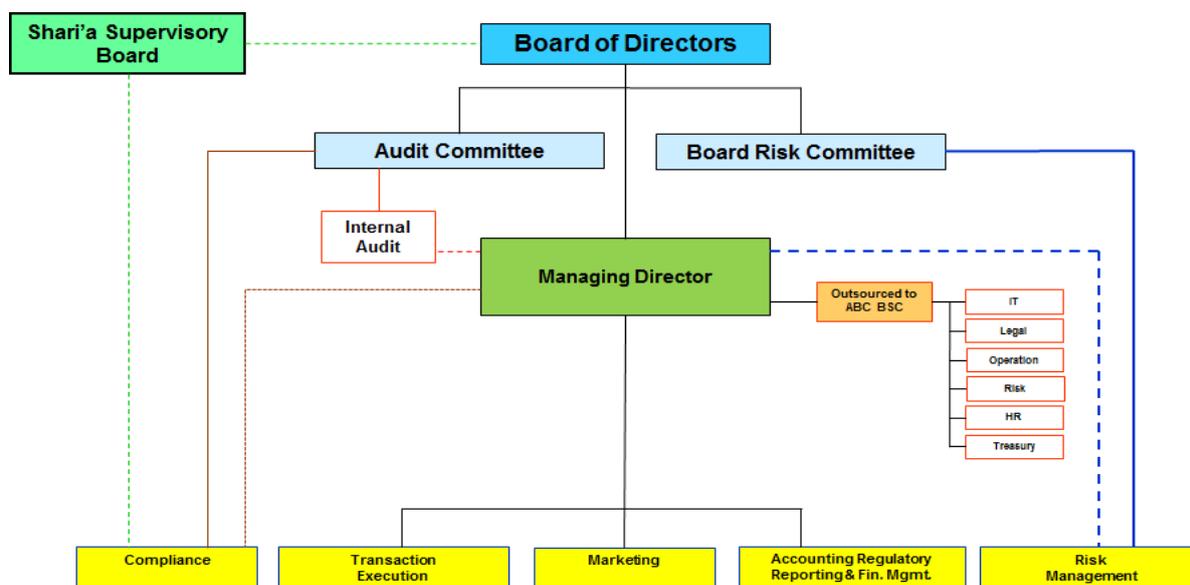

Arab Banking Corporation B.S.C. [ABC], which operates under a wholesale banking licence issued by the CBB, holds 100% of the share capital of the Bank.

The consolidated financial statements and capital adequacy regulatory reports of the Group have been prepared and consolidated on a consistent basis.

The ownership in the subsidiary as at 30 June 2011 is as follows:

Name	Nature of business	Country of incorporation	Amount and % of holding
ABC Clearing Company	Islamic Investment Company	Cayman Islands	US\$ 2,000 and 100% management shares

Whilst the Board of Directors [BOD] supervise the overall activities of the Bank, the BOD, Audit and Governance Committee and the Board Risk Committee are tasked with overseeing the respective areas. The following chart shows the organisational structure of the Bank, including the reporting lines to the various BOD committees.

The Bank has in place comprehensive policies regarding the remuneration and benefits provided to members of the BOD and its committees, senior management and staff. With regard to directors, compensation comprises fixed annual remuneration and attendance allowances, while for senior management and staff, compensation comprises a number of fixed elements, covering salary, allowances and benefits, in addition to variable, performance-related elements.

The Group is committed to best practice Corporate Governance Principles and Guidelines and as such, communicates all relevant information to its stakeholders on time, clearly and through a variety of channels, including maintaining an up-to-date website.

30 June 2011

3. Shari'a compliance

Shari'a compliance risk is an operational risk facing Islamic banks which can lead to non-recognition of income, reputational loss and resulting franchise risk on grounds of non-Shari'a compliance. To manage such risks, the Shari'a Compliance Officer of the Group has been tasked to conduct regular Shari'a compliance reviews to ensure that documentation, procedures and execution of transactions are in accordance with the Shari'a Standards issued by the AAOIFI and Shari'a rules and principles as determined by the Shari'a Supervisory Board of the Bank [the SSB]. The results of such reviews are being regularly reported to the SSB. Cases of non-Shari'a compliance are thoroughly investigated to establish causes of occurrence and to introduce adequate controls to avoid their recurrence in the future.

There is no non-Shari'a compliant earned during the period ended 30 June 2011.

The SSB of the Group consists of three Shari'a scholars (Chairman and two members). The SSB meets periodically or as and when there is a need to hold a meeting. The members receive a fixed sum of money as attendance fee for every meeting they attend, in addition to a fixed amount paid annually to each member as remuneration, irrespective of the number of meetings held during the year or the financial results of the Group.

4. Capital structure

The Group's capital base comprises of (a) Tier 1 capital which includes share capital, reserves and retained earnings, and (b) Tier 2 capital which consists of the current year profit and unrealized gains arising from fair valuing equities.

The issued and paid-up share capital of the Bank was US\$ 132.5 million at 30 June 2011, comprising of 1,325,000 shares of US\$ 100 each.

The Group's capital base of US\$ 224.5 million comprises Tier 1 capital of US\$ 219.2 million and Tier 2 capital of US\$ 5.3 million as detailed below:

Breakdown of capital base

<i>US\$ million</i>	Tier 1	Tier 2	Total
Issued and fully paid ordinary shares	132.5	-	132.5
Legal / statutory reserves	13.2	-	13.2
Retained profit brought forward	73.5	-	73.5
Profit for the period	-	5.1	5.1
Unrealized gains arising from fair valuing equities	-	0.2	0.2
Capital base	219.2	5.3	224.5
Risk weighted assets [RWA]			
Credit risk			882.4
Market risk			-
Operational risk			43.9
			926.3
Tier 1 ratio			23.7%
Capital adequacy ratio			24.2%

30 June 2011

5. Capital adequacy ratios [CAR]

The purpose of capital management at the Group is to ensure the efficient utilisation of capital in relation to business requirements and growth, risk profile and shareholders' returns and expectations. The Group manages its capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of its activities. In order to maintain or adjust the capital structure, the Group may issue capital / Tier 2 securities and / or adjust the amount of dividend payment to shareholders. No changes have been made in the objectives, policies and processes of the Group from the previous years.

The Group's total capital adequacy ratio as at 30 June 2011 was 24.2% compared with the minimum regulatory requirement of 12%. The Tier 1 ratio was 23.7% for the Group. The Group ensures adherence to the CBB's requirements by monitoring its capital adequacy against higher internal limits.

6. Profile of risk-weighted assets and capital charge

The Group has adopted the standardised approach for credit, market and operational risks for regulatory reporting purposes. The Group's risk-weighted capital requirements for credit, market and operational risks are given below:

6.1 Credit risk

i) Definition of exposure classes per Standard Portfolio

The Group has a diversified funded and unfunded credit portfolio. The exposures are classified as per the Standard Portfolio approach mentioned under the CBB's Basel II capital adequacy framework covering the standardised approach for credit risk.

The descriptions of the counterparty classes along with the risk weights to be used to derive the risk-weighted assets are as follows:

a. Claims on sovereigns

These pertain to exposures to governments and their central banks. Claims on Bahrain and GCC sovereigns are risk weighted at 0%. Claims on all other sovereigns are given a risk weighting of 0% where such claims are denominated and funded in the relevant domestic currency of that sovereign. Claims on sovereigns, other than the aforementioned, are risk-weighted based on their credit ratings.

b. Claims on public sector entities [PSEs]

Listed Bahrain PSEs are assigned 0% risk weight. Other sovereign PSEs, in the relevant domestic currency and for which the local regulator has assigned risk weight as 0%, are assigned 0% risk weight by the CBB. PSEs other than the aforementioned are risk-weighted based on their credit ratings.

c. Claims on multilateral development banks [MDBs]

All MDBs are risk-weighted in accordance with their credit rating, except for banks part of the World Bank Group which is risk-weighted at 0%.

PUBLIC DISCLOSURES

30 June 2011

d. Claims on banks

Claims on banks are risk-weighted based on the ratings assigned to them by external rating agencies. However, short term claims on locally incorporated banks may be assigned a risk weighting of 20% where such claims on the banks are of an original maturity of three months or less and the claims are denominated and funded in either Bahraini Dinars or US Dollars.

Preferential risk weights that are one category more favourable than the standard risk weighting are assigned to claims on foreign banks licensed in Bahrain of an original maturity of three months or less denominated and funded in the relevant domestic currency. Such preferential risk weights for short-term claims on banks licensed in other jurisdictions are allowed only if the relevant supervisor also allows this preferential risk weighting to short-term claims on its banks.

No claim on an unrated bank would receive a risk weight lower than that applied to claims on its sovereign of incorporation.

e. Claims on corporates

Claims on corporates are risk-weighted based on credit ratings. Risk weights for unrated corporate claims are assigned at 100%.

f. Past due exposures

The unsecured portion of any facility (other than a qualifying residential mortgage facility) that is past due for more than 90 days, net of specific provisions (including partial write-offs), is risk-weighted as follows:

- 150% risk weight when specific provisions are less than 20% of the outstanding amount of the facility.
- 100% risk weight when specific provisions are greater than 20% of the outstanding amount of the facility.

g. Equity portfolios

Investments in listed equities are risk-weighted at 100% while unlisted equities are risk weighted at 150%.

h. Project finance exposures

Exposures on project finance are risk-weighted according to the Regulatory Slotting Criteria, in which the risk weighting ranges between 70% and 250%.

i. Other exposures

These are risk-weighted at 100%.

PUBLIC DISCLOSURES**30 June 2011****ii) Credit exposure and risk-weighted assets**

<i>US\$ Thousands</i>	Gross credit exposure	Funded Exposure	Un-Funded Exposure	Risk-weighted assets for Funded Exposures	Risk-weighted assets for Un-Funded Exposures	Total Risk Weighted Assets	Capital Charge (12%)
Sovereigns	81,945	81,945	-	14,981	-	14,981	1,798
Claims on banks	160,926	159,757	1,169	112,250	72	112,322	13,479
Claims on Corporates	643,516	614,364	29,152	511,518	29,152	540,670	64,880
Past due exposures	135,630	135,630	-	71,884	-	71,884	8,626
Project finance	202,205	201,403	802	140,982	562	141,544	16,985
Other	964	964	-	964	-	964	116
Total	1,225,186	1,194,063	31,123	852,579	29,786	882,365	105,884

Since the period end position is representative of the risk positions of the Group during the year, average gross exposures are not disclosed separately.

Breakdown of capital requirements for credit risk per type of Islamic financing contract is as follows:

<i>US\$ Thousands</i>	Gross credit exposure	Funded Exposure	Un-Funded Exposure	Risk-weighted assets for Funded Exposures	Risk-weighted assets for Un-Funded Exposures	Total Risk Weighted Assets	Capital Charge (12%)
Murabaha	427,520	409,664	17,856	274,810	17,856	292,666	35,120
Ijara	389,440	388,638	802	269,318	561	269,879	32,386
Ijara Rec	791	791	-	520	-	520	62
Sukuk	386,112	386,112	-	303,458	-	303,458	36,415
Mudaraba	882	882	-	882	-	882	106
Equity	1,544	1,544	-	1,544	-	1,544	185
LC	12,465	-	12,465	-	11,369	11,369	1,364
Other	6,432	6,432	-	2,047	-	2,047	246
Total	1,225,186	1,194,063	31,123	852,579	29,786	882,365	105,884

6.2 Market risk

The Group, with assistance from ABC, minimizes its market risk through:

- (i) match-funding its assets to reduce its profit rate risk;
- (ii) not taking commodity price risk by squaring position on transaction by transaction basis;
- (iii) funding exposures in the same currency and, hence, avoiding any foreign exchange currency risk; and
- (iv) maintaining no sukuk trading position.

Accordingly, the Group maintains no capital charge for market risk.

PUBLIC DISCLOSURES

30 June 2011

6.3 Operational risk

In accordance with the standardised methodology, the total capital charge in respect of operational risk was US\$ 43.9 million. This capital charge was computed by categorising the Group's activities into two business lines (out of the eight business lines defined by the Basel II framework) and multiplying the business line's three-year average gross income by a pre-defined beta factor.

Indicators of operational risk exposures:

Gross income <i>US\$ thousands</i>	9,035
Amount of non-Shari'a compliant income <i>US\$ thousands</i>	Nil
Number of Shari'a violations	Nil

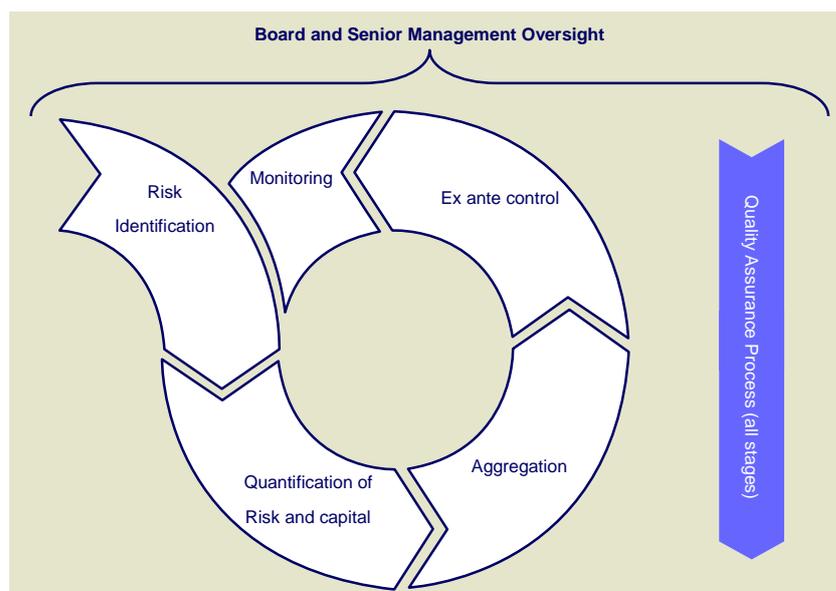

7. Risk management

7.1 Introduction

Risk is inherent in the Group's activities and is managed through a process of ongoing identification, measurement and monitoring, subject to risk limits and other controls. The Group is exposed to credit risk, market risk, liquidity risk, operational risk, legal and strategic risk, as well as other forms of risk inherent in its financial operations.

Over the last few years, ABC has invested heavily into developing a comprehensive and robust risk management infrastructure. This includes risk identification processes under credit, market and operational risk spectrums, risk measurement models and rating systems, as well as a strong business process to monitor and control these risks. Figure 1 outlines the various congruous stages of the risk process.

Figure 1:

7.2 Risk management structure

ABC's Executive Management is responsible for implementing the risk strategy / appetite and policy guidelines set by the Board Risk Committee [BRC], including the identification and evaluation on a continuous basis of all significant risks to the business and the design and implementation of appropriate internal controls to minimise them. This is done through the BRC, senior management committees and the Credit & Risk Group of the Head Office, as follows:

Figure 2: Risk management structure

Within the broader governance infrastructure, the Board Committees carry the main responsibility of best practice management and risk oversight. At this level, the BRC oversees the definition of risk appetite, risk tolerance standards and risk process standards to be kept in place. The BRC is also responsible for co-ordinating with other Board Committees for monitoring compliance with the requirements of the regulatory authorities in the various countries in which ABC operates.

At the second level, the Head Office Credit Committee [HOCC] is responsible for credit decisions at the higher levels of ABC's lending portfolio, setting country and other high level ABC limits, dealing with impaired assets and general credit policy matters.

PUBLIC DISCLOSURES

30 June 2011

In addition to being part of the above structure, through the outsourcing of the support functions including the credit approval, the Group has the following risk management structure:

ALCO is mainly responsible for defining long-term strategic plans and short-term tactical initiatives for directing asset and liability allocation prudently for the achievement of ABC's strategic goals. ALCO monitors ABC's liquidity and market risks and the risk profile in the context of economic developments and market fluctuations, to ensure that ABC's ongoing activities are compatible with the risk/reward guidelines approved by the BRC. The above management structure, supported by teams of risk and credit analysts, as well as the IT systems, provide a coherent infrastructure to carry credit and risk functions in a seamless manner.

ABC's Operational Risk Management Committee [ORCO] is responsible for defining long-term strategic plans and short-term tactical initiatives for operational risk. It also has the overall responsibility to monitor and prudently manage exposure to operational risks including strategic and reputation risks.

Credit risk concentrations and thresholds

The first level of protection against undue credit risk is through country, industry and threshold limits, together with customer and customer group credit limits, set by the BRC and the HOCC and allocated between ABC and the various subsidiaries of ABC, including the Bank. Credit exposure to individual customers or customer groups is then controlled through a tiered hierarchy of delegated approval authorities based on the risk rating of the customer under ABC's internal credit rating system. Where unsecured facilities sought are considered to be beyond prudential limits, ABC policies require collateral to mitigate the credit risk in the form of cash, securities, and legal charges over the customer's assets or third-party guarantees. ABC also employs Risk Adjusted Return on Capital [RAROC] as a measure to evaluate the risk/reward relationship at the transaction approval stage. RAROC analysis is also conducted on a portfolio basis.

Single name concentrations are monitored on an individual basis. ABC's internal economic capital methodology for credit risk addresses concentration risk through the application of single-name concentration add-on. Under the CBB's single obligor regulations, banks incorporated in Bahrain are required to obtain the CBB's approval for any planned exposure to a single counterparty, or group of connected counterparties exceeding 15 percent of the regulatory capital base. This restriction applies only at the consolidated level of the ABC Group and, hence, the Bank has several exposures that exceed 15% of its capital base. However, none of these exposures exceed 15% of ABC's capital base.

PUBLIC DISCLOSURES

30 June 2011

As at 30 June 2011, the Group's three largest exposures in excess of 15% of the capital base are shown below:

<i>US\$ Thousands</i>	On Balance Sheet Exposure
Counterparty [A]	142,309
Counterparty [B]	62,980
Counterparty [C]	51,500

Excessive risk concentration

Concentrations arise when a number of counterparties are engaged in similar business activities or activities in the same geographic region or have similar economic features that would cause their ability to meet contractual obligations to be similarly affected by changes in economic, political or other conditions. Concentrations indicate the relative sensitivity of the Group's performance to developments affecting a particular industry or geographical location.

In order to avoid excessive concentrations of risk, the ABC Group policies and procedures include specific guidelines to focus on country and counterparty limits and maintaining a diversified portfolio. Identified concentrations of credit risks are controlled and managed accordingly.

Risk mitigation, collateral and other credit enhancements

The amount and type of collateral depends on an assessment of the credit risk of the counterparty. The types of collateral held by the Group mainly include cash, guarantees from banks and guarantees from ABC.

Management monitors the market value of collateral, requests additional collateral in accordance with the underlying agreement and monitors the market value of collateral obtained during its review of the adequacy of the allowance for impairment losses.

Exposures by type of Islamic financing contract that are covered by guarantees or by eligible collaterals are as follows:

<i>US\$ thousands</i>	Exposures	Guaranteed	Collateral	Net exposure
Funded Exposures (Murabaha)	135,630	131,561	2,914	132,716
Unfunded Exposures (LCs/LGs)	28,439	-	5,118	23,321

PUBLIC DISCLOSURES**30 June 2011****7.3 Geographical distribution of exposures**

The Bank's nature of business, being an Islamic Bank, results in concentration of exposures in the Muslim world. Moreover, the Bank's approved concentration of activities, which is also in line with its role within the ABC Group, has large concentration in the GCC countries, as illustrated in the table below:

US\$ Thousands

Country / Region	Gross Exposure	Percentage of Exposure
Bahrain	124,402	10.15%
Saudi Arabia	382,324	31.21%
Kuwait	146,780	11.98%
Qatar	66,335	5.41%
UAE	328,169	26.79%
Oman	18,458	1.51%
Other MENA Countries	21,132	1.72%
Other Asia	30,124	2.46%
Europe (Including Turkey)	82,568	6.74%
USA	24,894	2.03%
Total	1,225,186	100.00%

The geographical distribution of gross credit exposures by major type of credit exposures can be analysed as follows:

US\$ Thousands

Type of Financing / Region	Bahrain	Saudi Arabia	Kuwait	Qatar	UAE	Oman	Other MENA countries	Other Asia	Europe (Including Turkey)	USA	Total
Sovereigns	31,364	-	-	-	35,600	-	-	14,981	-	-	81,945
Claims on banks	6,959	-	-	5,045	50,042	-	1,169	15,143	82,568	-	160,926
Claims on Corporates	81,046	191,613	40,282	43,191	242,527	-	19,963	-	-	24,894	643,516
Past due exposures	4,069	53,012	78,549	-	-	-	-	-	-	-	135,630
Project finance	-	137,699	27,949	18,099	-	18,458	-	-	-	-	202,205
Other	964	-	-	-	-	-	-	-	-	-	964
Total	124,402	382,324	146,780	66,335	328,169	18,458	21,132	30,124	82,568	24,894	1,225,186

7.4 Industrial sector analysis of the exposures

The industrial sector analysis of exposures is as follows:

US\$ Thousands

	Gross Exposure	Funded Exposure	Un funded Exposure
Financial Institutions	390,498	389,329	1,169
Commercial real estate	223,378	223,378	-
Manufacturing	459,628	442,304	17,324
Construction	32,174	20,878	11,296
Trading	30,725	29,391	1,334
Government	50,581	50,581	-
Transportation	16,731	16,731	-
Tourism	20,507	20,507	-
Other	964	964	-
Total	1,225,186	1,194,063	31,123

PUBLIC DISCLOSURES

30 June 2011

The industrial sector analysis of gross credit exposures by major types of credit exposures can be analysed as follows:

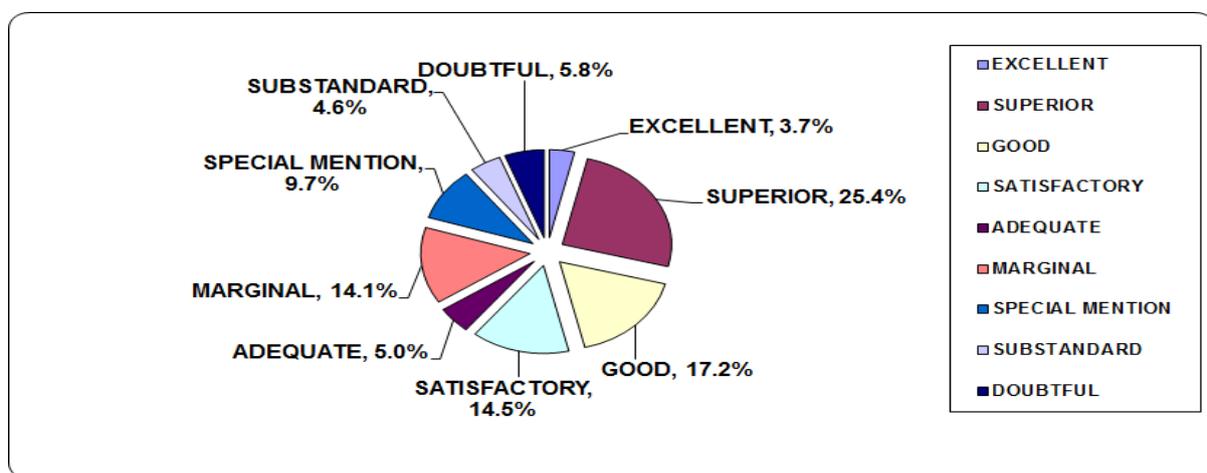

<i>US\$ Thousands</i>										
<i>Type of Financing/Industry</i>	Financial Institutions	Commercial real estate	Manufacturing	Construction	Trading	Government	Transportation	Tourism	Other	Total
Sovereigns	31,364	-	-	-	-	50,581	-	-	-	81,945
Claims on banks	160,926	-	-	-	-	-	-	-	-	160,926
Claims on Corporates	126,539	212,429	233,802	32,174	1,334	-	16,731	20,507	-	643,516
Past due exposures	71,669	10,949	23,621	-	29,391	-	-	-	-	135,630
Project finance	-	-	202,205	-	-	-	-	-	-	202,205
Other	-	-	-	-	-	-	-	-	964	964
Total	390,498	223,378	459,628	32,174	30,725	50,581	16,731	20,507	964	1,225,186

7.5 Exposure by external credit rating

The Group uses external ratings from Standard & Poor’s, Moody’s, Fitch Ratings and Capital Intelligence [accredited External Credit Assessment Institutions (ECAI’s)]. The breakdown of the Group’s exposure into rated and unrated categories is as follows:

<i>US\$ Thousands</i>	Gross credit exposure	Rated Exposure	Unrated Exposure
Sovereigns	81,945	81,945	-
Claims on banks	160,926	159,757	1,169
Claims on Corporates	643,516	281,374	362,142
Past due exposures	135,630	-	135,630
Project finance	202,205	-	202,205
Other	964	-	964
Total	1,225,186	523,076	702,110

It is the Group's policy to maintain accurate and consistent risk ratings across the credit portfolio through its internal risk rating system. Risk ratings are supported by a variety of financial analytics, combined with processed market information, to provide the main inputs for the measurement of counterparty credit risk. All internal ratings are tailored to the various categories, are derived in accordance with ABC's credit policy, and are assessed and updated regularly. Each risk rating class is mapped to grades equivalent to Standard & Poor’s, Moody’s, Fitch Ratings and Capital Intelligence.

PUBLIC DISCLOSURES**30 June 2011**

Percentages have been calculated internally based on the sum of funded counterparty exposure and unfunded exposures before applying credit conversion factors.

7.6 Maturity analysis of funded exposures

Residual contractual maturity analysis of the Group's major types of funded credit exposures, amounting to US\$ 1,194,063 thousand, is as follows:

<i>US\$ Thousands</i>	Within 1 month	1-3 months	3-6 months	6-12 months	Total within 12 months	1-5 years	5-10 years	10-20 years	Total over 12 months	Undated	Total
Sovereigns	-	1,753	16,439	2,917	21,109	60,783	-	-	60,783	53	81,945
Claims on banks	5,600	15,114	50,150	66,467	137,331	20,882	-	-	20,882	1,544	159,757
Claims on Corporates	144,555	49,384	34,451	35,133	263,523	301,023	46,318	-	347,341	3,500	614,364
Past due exposures	-	-	-	-	-	-	-	-	-	135,630	135,630
Project finance	624	14	4,489	6,341	11,468	70,382	98,976	20,577	189,935	-	201,403
Other	-	79	168	168	414	336	-	-	336	214	964
Total	150,779	66,344	105,697	111,026	433,845	453,406	145,294	20,577	619,277	140,941	1,194,063

7.7 Maturity analysis of unfunded exposures

The residual contractual maturity analysis of unfunded exposures is as follows:

<i>US\$ Thousands</i>	Within 1 month	1-3 months	3-6 months	6-12 months	Total within 12 months	1-5 years	Total over 12 months	Total
Claims on banks	-	57	236	876	1,169	-	-	1,169
Claims on Corporates	7,500	-	4,534	5,734	17,768	11,384	11,384	29,152
Project finance	-	-	-	-	-	802	802	802
Total	7,500	57	4,770	6,610	18,937	12,186	12,186	31,123

Unfunded exposures include credit-related financial instruments, comprising of letters of credit, guarantees and commitments.

For credit-related contingent items, the nominal value is converted to an exposure through the application of a credit conversion factor [CCF]. The CCF is at 20%, 50% or 100% depending on the type of contingent item, and is used to convert off-Balance sheet notional amounts into an equivalent on-Balance sheet exposure.

Undrawn facilities and other commitments represent commitments that have not been drawn down or utilised at the reporting date. The nominal amount provides the calculation base to which a CCF is applied for calculating the exposure. CCF ranges between 20% and 50% for commitments with original maturity of up to one year and over one year respectively and 0% CCF is applicable for commitments which can be unconditionally cancelled at any time.

PUBLIC DISCLOSURES**30 June 2011**

The table below summarises the notional principal amounts and the relative exposures before applying credit risk mitigation:

<i>US\$ thousands</i>	Notional Principal	Credit Exposure*
Trade-related contingent items	5,847	1,169
Transaction-related contingent items	22,592	11,296
Undrawn facilities and other commitments	54,518	18,658
RWA for contingent items		29,786

* Credit exposure is after applying CCF.

At 30 June 2011, the Group held cash collaterals in relation to credit-related contingent items amounting to US\$ 5,118 thousand.

Penalties imposed on customers

During the year, no penalties were imposed on customers.

7.8 Impairment of assets**Impairment and un-collectability of financial assets**

An assessment is made at each quarter end to determine whether there is objective evidence that a specific financial asset or group of financial assets may be impaired. If such evidence exists, an impairment loss is recognised in the consolidated statement of income.

Evidence of impairment may include indications that the counterparty or a group of counterparties is experiencing significant financial difficulty, default or delinquency in profit or principal payments, the probability that they will enter bankruptcy or other financial re-organisation and, where observable data indicates, that there is a measurable decrease in the estimated future cash flows such as changes in arrears or economic conditions that correlate with defaults.

Impairment is determined as follows:

- (a) for assets carried at amortised cost, impairment is based on the present value of estimated future cash flows discounted at the original effective profit rate;
- (b) for assets carried at fair value, impairment is the difference between cost and fair value; and
- (c) for assets carried at cost, impairment is based on the present value of estimated future cash flows discounted at the current market rate of return for a similar financial asset.

The Group uses the provision account to record impairments except for equity and similar investments, which are written down, with future increases in their fair value being recognised directly in equity.

PUBLIC DISCLOSURES

30 June 2011

On a quarterly basis the Group assesses whether any provision for impairment should be recorded in the consolidated statement of income. In particular, considerable judgment by management is required in the estimation of the amount and timing of future cash flows when determining the level of provision required. Such estimates are necessarily based on assumptions about several factors involving varying degrees of judgment and uncertainty, and actual results may differ resulting in future changes in such provisions.

Impairment against specific groups of financial assets

In addition to specific provisions against individually significant facilities and investments, the Group also makes a provision to cover impairment against specific group of financial assets where there is a measurable decrease in estimated future cash flows. This provision is based on any deterioration in the internal grade of the financial asset since it was granted. The amount of provision is based on the historical loss pattern for facilities within each grading and is adjusted to reflect current economic changes.

The internal grading process takes into consideration factors such as collateral held, deterioration in country risk, industry and technological obsolescence, as well as identified structural weakness or deterioration in cash flows.

7.9 Market risk

Market risk is the risk that the Group's earnings or capital, or its ability to support its business strategy, will be impacted by changes in market rates or prices related to profit rates, equity prices, credit spreads, foreign exchange rates and commodity prices.

ABC has established risk management policies and limits within which exposure to market risk is monitored, measured and controlled by the Market Risk Management [MRM] with strategic oversight exercised by ABC's ALCO. MRM is responsible for developing and implementing market risk policy and risk measuring / monitoring methodology and for reviewing all new trading and investment products and product limits prior to ALCO approval. MRM's core responsibility is to measure, report, monitor and control market risk.

The Group classifies market risk into the following:

- **Non-trading market risk in securities**
Non-trading market risk arises from market factors impacting securities that are held for long-term investment.
- **Asset and liability risk**
Non-trading asset and liability risk exposures arise where the re-pricing characteristics of the Group's assets do not match with those of liabilities.
- **Liquidity Risk**
Liquidity risk is the risk that maturing and encashable assets may not cover cash flow obligations (liabilities). In this respect, the Group is supported by ABC, through the provision of a line of credit to cover any shortfall in liquidity. Accordingly, the Group's liquidity needs are taken into consideration in ABC's liquidity management.

PUBLIC DISCLOSURES

30 June 2011

As there is no specific measure that reflects all aspects of market risk, ABC analyses risk using various risk measures, reporting results to senior management.

The measurement techniques used to measure and control market risk are:

- Value-at-Risk [VaR]
- Basis Point Value [BPV]
- Stress Testing
- Non-Technical Risk Measures

On an annual basis, ABC's BRC reviews and approves VaR trading limits, BPV trading and investment Limits, and Non-Technical Trading and Investment Limits.

It should be noted that the Bank applies BPV on the sukuk portfolio and the non-technical risk measures in its liquidity management at the Bank level. For the non-technical measures, notional limits are set for investment products, which are approved by the Board Risk Committee.

- **Currency risk**

The Group is exposed to foreign exchange rate risk through its structural positions. In general, the Group uses matched currency funding to eliminate such a risk.

- **Profit rate risk**

Profit rate risk arises from the possibility that changes in profit rates will affect future profitability or the fair values of financial instruments. The Group is exposed to profit rate risk as a result of mismatches of profit rate re-pricing of assets and liabilities. The most prominent market risk factor for the Bank is profit rates. This risk is minimised as the Group's rate sensitive assets and liabilities are mostly floating rate, where the duration risk is lower. In general, the Group translates fixed rate instruments to floating rate to better manage the duration in the asset book.

- **Commodity risk (price risk)**

The Group would be exposed to commodity risk if it holds commodity for its Murabaha transactions. However, in order to minimise or eliminate this risk, the Group limits its holding of commodity to the day of the transaction and it settles its position for each specific transaction, hence eliminating overnight price risk in the commodities traded.

- **Profit Rate Risk in the Banking Book [PRRBB]**

The Bank uses the BPV approach to control PRRBB. BPV measures changes in economic value resulting from changes in profit rates. In the BPV methodology, the modified duration approach and, for some products, the effective duration approach is used to measure the PRRBB. Modified duration is a good measure of linear risk for profit rate sensitive products.

The BPV measure incorporates the entire rate sensitive segment of the statement of financial position for the Group and is classified into appropriate buckets. Non-maturity profit rate sensitive assets and liabilities are bucketed in the short term. Equity is excluded from these computations.

As at 30 June 2011, an immediate shift by 25 basis points in profit rates would potentially impact the Group's economic value by US\$ 901 thousand.

PUBLIC DISCLOSURES**30 June 2011**

At the period end, the Group was exposed to profit rate risk on its financial assets and financial liabilities. The following table indicates the profit rates during the period expressed as a percentage of the principal outstanding.

US\$ thousands

	%
Investments	0.65 – 5.77
Murabaha receivables	0.64 – 5.00
Musharaka financing	4.90 – 6.33
Ijara	0.75 – 6.00
Murabaha payables	0.54 – 2.54

7.10 Equity position risk

Equity position risk arises from the possibility that changes in the price of equities or equity indices will affect future profitability or the fair values of financial instruments. As of the reporting date, the Bank had an equity position amounting to US\$ 1,993 thousand.

7.11 Business risk

Business risk represents the earnings volatility inherent in all business activities due to the uncertainty of revenues and costs associated with changes in the economic and competitive environment. Business risk is evaluated through a Business and Strategy Development Process. A Risk Budget is developed at the start of each year along with a Business Plan. Subsequently, the actual quarterly performance is compared with budget, including the historical volatility in earnings, and the detailed financial budget, which supports both the decision making and the planning process.

7.12 Liquidity risk

The Group's principal sources of liquidity are deposits placed with the subsidiary funds raised through commodity Murabahas. However, for any shortfall in liquidity, the Bank relies on ABC; hence, the Group's liquidity needs are taken into consideration in ABC's liquidity management process. ABC maintains liquid assets at prudential levels to ensure that cash can quickly be made available to honour all its obligations, even under adverse conditions. ABC is generally in a position of excess liquidity, its principal sources of liquidity being its deposit base, liquidity derived from its operations and inter-bank borrowings. The Minimum Liquidity Guideline [MLG] is used to manage and monitor daily liquidity. The MLG represents the minimum number of days ABC can survive the combined outflow of all deposits and contractual draw-downs under market value driven encashability scenarios.

In addition, an internal liquidity / maturity profile is generated to summarise the actual liquidity gaps versus the revised gaps based on internal assumptions.

The following table summarises the liquidity ratios as at 30 June 2011:

Liquid assets ratio	32.8%
Short-term assets to short-term liabilities	45.0%

PUBLIC DISCLOSURES

30 June 2011

7.13 Operational risk

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes or systems, or from external events. Operational risk is inherent in all business activities and can never be eliminated entirely; however, shareholder value can be preserved and enhanced by managing, mitigating and, in some cases, insuring against operational risk. To achieve this goal, ABC has developed an operational risk framework, which includes identification, measurement, management, monitoring and risk control / mitigation elements. A variety of underlying processes are being deployed across ABC including risk and control self-assessments, Key Risk Indicators [KRI], event management, new product review, approval processes and business contingency plans.

ABC intends to make operational risk transparent throughout the enterprise, to which end processes are being developed to provide for regular reporting of relevant operational risk management information to business management, senior management, the Operational Risk Committee of ABC, the BRC of ABC and the Board of Directors.

ABC's policy dictates that the operational functions of booking, recording and monitoring of transactions are carried out by staff that are independent of the individuals initiating the transactions. Each business line – including Operations, Information Technology, Human Resources, Legal & Compliance and Financial Control - is further responsible for employing the aforementioned framework processes and control programmes to manage its operational risk within the guidelines established by the Group's policy, and to develop internal procedures that comply with these policies. To ensure that all operational risks to which the Group is exposed are adequately managed, support functions are also involved in the identification, measurement, management, monitoring and control / mitigation of operational risk, as appropriate.

7.14 Legal risk

Inadequate documentation, legal and regulatory incapacity, insufficient authority of a counterparty and contract invalidity or unenforceability are all examples of legal risk. Identification and management of this risk are the responsibilities of the Head Office Legal & Compliance Department [LCD] and are carried out through consultation with internal and external legal counsels, together with close monitoring of the litigation cases involving the Group, as well as ABC.

8. Capital management

Internal Capital Adequacy Assessment Process [ICAAP]

The Group's capital management aims to maintain an optimum level of capital to enable it to pursue strategies that build long-term shareholder value, whilst always meeting minimum regulatory ratio requirements. The diagram below illustrates this concept:

The key principles driving capital management at the Group include:

- Adequate capital is maintained as buffer for unexpected losses to protect stakeholders, i.e. shareholders and depositors; and
- Maximise return on capital and generate sustainable returns above the cost of capital.

The Group seeks to achieve the following goals by implementing an effective capital management framework:

- Effective internal capital adequacy;
- Meet the regulatory capital adequacy ratios and have a prudent buffer;
- Generate sufficient capital to support overall business strategy; and
- Integrate capital allocation decisions with strategic and financial planning process.

In addition, to prepare itself for compliance with the Foundation Internal Ratings-Based [FIRB] requirements, the Group has developed an ICAAP framework. The purpose of the ICAAP framework is to document the Group's structured process for the ongoing assessment of the Group's overall capital adequacy in relation to the Group's risk profile and a strategy for capital management as set out in Principle 1 of Basel II Pillar II.

PUBLIC DISCLOSURES

30 June 2011

This framework outlines the Group's risk strategy, capital objectives, methodology used to measure internal capital, the related assumptions underpinning the methodologies and a set of processes for capital management such as reviewing, monitoring and controlling capital usage and allocation, including:

- In January 2008, the CBB issued ICAAP guidelines for capital management. Within this framework the risk strategy as approved by the Board is incorporated, underscoring Board and senior management responsibility and oversight. The risk strategy document outlines the Group's risk appetite, capital adequacy goals and risk targets.

- The Group has an integrated approach to risk strategy and business strategy which analyses current and future capital requirements in relation to strategic objectives as part of the annual business planning process. The Business Plan is used in estimating the economic capital projections. In addition, throughout the year, as part of the process, actual usage is monitored against the projections.

- Comprehensive assessment of economic capital, i.e. credit, market and operational risks, and processes relating to other risks such as liquidity, profit rate risk in the banking book, strategic and reputational risks.

- The processes in place for monitoring, reporting and internal audit review.

The methodologies for internally estimating capital for the Group's key risks are as follows:

- a. **Credit Risk:** Assessed on the basis of FIRB Risk Weights (as set out in the table under Annexure 3 of the Basel II Accord – *Illustrative IRB Risk Weights*) for Unexpected Loss [UL]. This supports the internal estimation of Economic Capital per Business Segment and Business Unit, and aggregated at the Group level.
- b. **Market Risk:** Computed for the banking book using the Internal Model approach.
- c. **Operational Risk:** Applied on the Standardised Approach basis.

Other risks such as **Liquidity, Strategic and Reputational risks** are currently captured providing a capital buffer.

The results of the ICAAP process are subject to stress testing to take account of the breakdown of the underlying assumptions. Specific stress tests have been developed to focus on the key risks the Group faces based on its risk exposure, portfolio and strategic objectives.

The output of the ICAAP gives senior management and the Board an improved view of the risks the Group faces and the impact of these risks.

ABC has implemented an advanced Economic Capital Management System, which is now being implemented at the Bank. This tool will allow, at all levels of granularity, estimation of Economic Capital, RAROC, Sharpe Ratios, Risk Contributions, and effects of component accounts and counterparties for the effects of diversification benefits and concentration risks. This system will also allow an advanced capability for estimating economic capital under stress scenarios.

PUBLIC DISCLOSURES**30 June 2011****Supervisory Review and Evaluation Process [SERP]**

The CBB is the lead regulator for the Group and sets and monitors capital requirements on both a consolidated and solo basis. The CBB requires each Bahrain-based bank or banking group to maintain a minimum ratio of total capital to risk-weighted assets of 12%, taking into account both on and off-Balance sheet transactions. However, under the SERP guidelines, the CBB would also make an individual risk profile assessment of all banks and, instead of applying a standard minimum capital adequacy requirement, the supervisor may allow a lower capital adequacy ratio in excess of 8% for a bank with sound risk management capabilities. The CBB initiated this assessment process in the first quarter of 2008. The Group's capital management strategy is to currently maintain a buffer over the 12% minimum regulatory capital requirement while enhancing its risk management and risk control infrastructure. This would ultimately allow the Group to achieve a successful assessment and pursue possible lower capital requirements from the CBB. At the same time, senior management strongly believes in the economic value of capital and is committed to maximise intrinsic value for all stakeholders.

9 Other disclosures**9.1 Related party transactions**

Related parties represent associated companies, major shareholders, directors and key management personnel of the Group and entities controlled, jointly controlled or significantly influenced by such parties. Pricing policies and terms of these transactions are approved by the Group's senior management and are at arm's length basis.

a. Exposures to related parties

<i>US\$ thousands</i>	
Claims on shareholders	139,097
Claims on Directors and senior management	524
Claims on staff	147

b. Liabilities to related parties

<i>US\$ thousands</i>	
Connected deposits	858,992

c. Income and expenses arising from dealing with related parties

<i>US\$ thousands</i>	
Income from Murabaha receivables	36
Profit on Murabaha payables	4,068
Charges by ABC	424
Fees paid to ABC	350

PUBLIC DISCLOSURES**30 June 2011****9.2 Ageing analysis of non-performing / impaired Islamic financing and securities**

In accordance with the guidelines issued by the CBB, credit facilities are placed on non-accrual status and profit suspended when either principal or profit is overdue by 90 days, whereupon profit credited to income is reversed. Following an assessment of impairment, specific provision is established if there is objective evidence that a credit facility is impaired.

An ageing analysis of all non-performing Islamic financing facilities on non-accrual basis, together with their related provisions, is as follows:

Islamic financing

<i>US\$ thousands</i>	Principal*	Provisions	Net book value
3 months up to 1 year	10,949	-	10,949
1 to 3 years	120,612	-	120,612
Over 3 years	4,069	-	4,069
Total	135,630	-	135,630

* Carrying values of US\$ 131,561 thousand have been guaranteed by ABC which also have provided a provision of US\$ 94,597 thousand against the guaranteed exposure. All past due financing facilities are from GCC countries.

Securities

The Group has specific impairment provisions of US\$ 17,131 thousand on its securities portfolio, all of the securities are from GCC countries.

9.3 Restructured facilities

There were no facilities which were restructured during the period ended 30 June 2011.

9.4 Assets sold under recourse agreements

The Group has not entered into any recourse agreement during the period ended 30 June 2011.

9.5 Movement in specific and collective impairment provisions

<i>US\$ thousands</i>	Specific provision for securities
As at 1 January 2011	16,631
Additional provisions made	500
As at 30 June 2011	17,131

9.6 Industry sector analysis of the specific impairment provisions charges

Impairment of US\$ 9,131 thousand is in the financial institution sector and US\$ 8,000 thousand in the construction and real estate sector.

PUBLIC DISCLOSURES**30 June 2011****9.7 Equity positions in the banking book**

As at 30 June 2011, the equity position of the Group amounted to US\$ 1,993 thousand, all of which is quoted.

9.8 Quantitative indicators of financial performance, position and liquidity risk

	2007	2008	2009	2010	June 2011
Cost / income ratio %	10.1	14.7	24.5	30.8	36.2
Return on average equity %	34.7	13.1	6.6	1.2	4.6*
Return on average assets %	4.7	1.8	0.7	0.2	0.8*
Liquidity assets ratio %	26.2	24.6	31.9	30.6	32.8
Short term assets to short term liabilities %	63.5	29.5	26.8	39.1	45.0
Risk asset ratio – Tier 1 %	15.1	15.4	23.0	24.2	24.2
Risk asset ratio – Total %	15.7	17.6	24.1	24.5	25.8

* Annualised
